

Implementation & Future Impact

Implementation

- Real-time data collected through smart road cameras
 - AI analyzes traffic density and detects violations
 - Automatic traffic light optimization to reduce congestion
 - Integration with a government dashboard for real-time monitoring
 - University buses with optimized, congestion-free routes
-

Future Impact

- Reduced traffic congestion around campuses
- Improved air quality and lower emissions
- Safer environment for pedestrians and cyclists
- Faster and more efficient daily transportation
- Scalable solution for other universities and cities
